3-4 Instruction (E.S MOTOR)

● Run/Stop function

If SW7 is switched to "RUN" and then switch SW2 to run from section 3-1,2 and 3, the motor will rotate per fixed speed set by external speed controller. When switched to "STOP" rotation will spontaneously stop by inertia force. (When SW2 and SW7 is to be linked and used braking and keeping position will be done by electromagnetic brake.)

● Run/Brake function

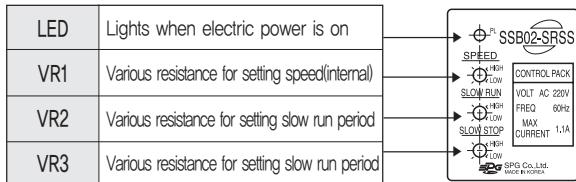

If SW3, SW4 and SW7 is linked and set to brake while SW2 is on RUN position from the basic diagram of section 3-2,3 electric brake will function for 0.5 seconds to stop motor instantaneously and will keep position by electromagnetic brake. Please do not tamper with SW5 or SW6 for 0.5 seconds while brake is functioning.

● Slow Run/Slow Stop function

- When SW2 is switched to Run/Stop after slow run, slow stop is set by the volume of controller, the motor will slowly start and slowly stop per set time.
 - The speed of slow run and slow stop changes in rectilinearly against set time and the slope can be controlled within 0.5sec~15sec/1200rpm.
 - Slow stop cannot be set for shorter period than natural stopping period of motor.
- * Turn SW1 off to prevent control pack from generating heat when not used for a long period.

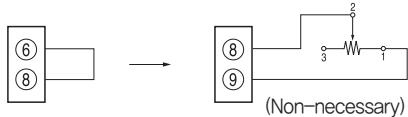

WIDE APPLICATION OF ELECTRIC WIRING

Panel Layout

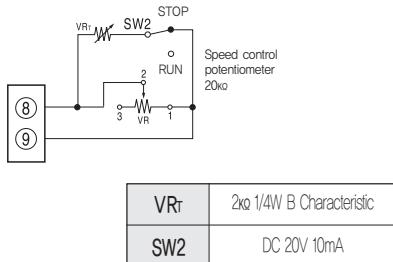

Using Internal Volume

SS TYPE has various internal resistance for speed setting device installed. Therefore, it is possible to use without external variable resistor for speed setting. When pin no.(6) and (8) of 11pin plug is connected, it is possible to use internal volume. Wiring diagram is the same except wiring for variable resistor for speed setting is not required.

How to Speed Up Operation

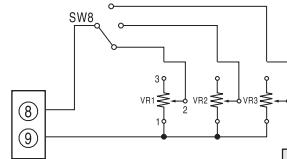

To quicken operating speed, as the set speed is decelerated, there are more delays to start rotation when switch is turned ON If this causes problems, refer to following diagram and connect VRT.(Variable resistor for operating time control.)

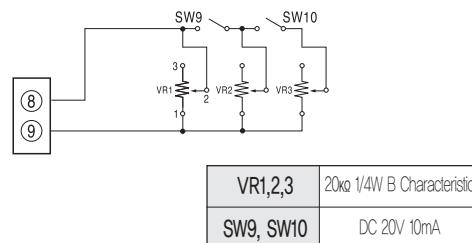

- ※ For instantaneous stop, operate both RUN/BRAKE switch and RUN/STOP switch above.
- ※ Place RUN/STOP switch to stop and control VRT until motor starts.

Multistage Speed Control

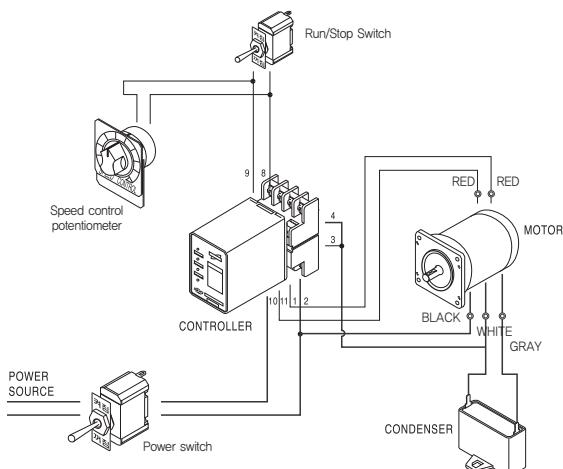

- When multistage speed control is required, set each VR1, VR2 and VR3 and then use SW8 to convert,

- When converting time is slow as rotating switch SW8, converting speed is possible by connecting SW9, SW10 as following diagram since motor rotates with full speed momentarily.

Total system

- If the power switch (SW1) is turned on, the power lamp of the control pack will be lighted.
- Speed of motor can be controlled without steps by using variable speed resistor for external speed setting. Turn to (HIGH) for high speed, and (LOW) for low speed.
- There are operating current flowing on thick line. Use cable with 0.75mm² for thick line and 0.5mm² for thin line.

SPEED CONTROLLER

: SS HIGH OUTPUT TYPE

Characteristics

- Used for induction speed control motors of 6W~90W, reversible speed control motors of 6W~40W and electromagnetic brake speed control motors of 6W~40W.
 - Built-in speed setting device on the case enables to control and set the speed of motors.
 - Instantaneous stop function is possible by electric brake.
 - It is a compact plug-in type with 11pins so it is easy to set and use.
 - It has slow run and slow stop functions, so operating and braking are not working rapidly, instead slowly.
 - There is time (period) setting device installed to control easily slow run and slow stop function.
 - Parallel operation is possible.
- * Parallel operation means that with one speed control volume, it can control plural speed controller at same time at same speed.

- Slow stop cannot be set for shorter period than natural stopping period of motor.
※ Turn SW1 off to prevent control pack from generating heat when not used for a long period.

APPLICATION OF SCHEMATIC DIAGRAM

Parallel operation

SS TYPE high output controller can control speed of multiple motors using one variable resistor as per following diagram at same speed.

Usage(Parallel operation)

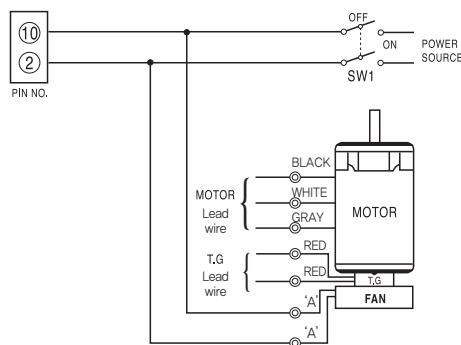

Connect power supply line(Terminal No. ②,⑩)& control line (Terminal No. ⑧, ⑨) for same line like the side wiring. In case of other motor and control pack, set power line and control line for parallel operation.

Warning

- Connect to correct pin numbers for power line and control line.
- The capacity of variable resistor for speed setting is calculated as follows.
VRX=20/N k Ω , N/4W(N : Quantity of motor)
eg) For 2EA of motors, it is 10k Ω 1/2W
- Although every motor runs at almost the same speed, there could be slight error due to difference of load and variation of products. To prevent this phenomenon, prepare 5~10% of resistance and 1/4 capacity of VRx(Variable resistance for speed setting)with SVR(Variable resistor for precise control) of terminal ⑧.

◀ For wiring of 220V~240V, 50Hz motor, change gray to brown.

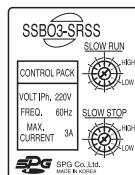

Box Fan Motor Connection

VOLTAGE	LEAD WIRE COLOR 'A'
SINGLE PHASE AC100V~110V	Brown
SINGLE PHASE AC200V~240V	Yellow

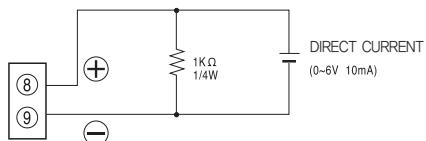

※ For the connection of something other than the box fan, refer to the electrical wiring diagram for the corresponding connection.

Panel

Speed control using external direct current

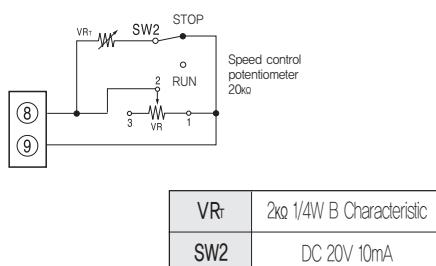

When speed is controlled by external direct current instead of supplied variable resistor for external speed setting, connect the wires of direct current with control pack as following diagram. (However, output of direct current has to be separated and insulated with alternative current input and avoid changing polarity.)

(The connection of speed control using external direct current)

Increasing operating speed

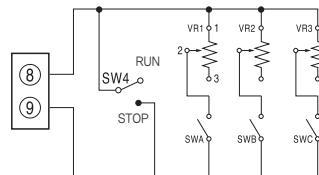

To quicken operating speed, as the set speed is decelerated, there are more delays to start rotations when switch is turned 'ON'. If this causes problems, please refer to following diagram and connect VRT (Variable resistor for operating time control)

- ※ For instantaneous stop, operate both RUN/BRAKE switch and RUN/STOP switch above.
- ※ Place RUN/STOP switch to stop and control VRT until motor starts.

Multistage speed conversion

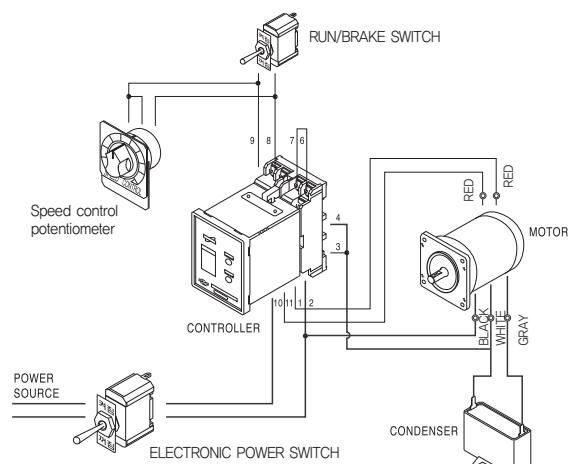

1. When multistage speed control is required, set each VR1, VR2 & VR3 and conversion is possible by using SWA, SWB, and SWC. Switch conversion time should be maintained similar to the operating time of relay operation.

VR1,2,3	20kΩ 1/4W B Characteristic
SW1,2,3,4	DC 20V 10mA

2. One external speed setting volume is included in a control pack. If additional external speed setting volume is required, please purchase SVR20KH.

Total system

1. Speed of motor can be controlled without steps by using variable speed resistor for external speed setting. Turn to (HIGH) for high speed, and (LOW) for low speed.
2. There are operating current flowing on thick line. Use cable with 0.75mm² for thick line and 0.5mm² for thin line.
3. For single-phase AC220V~240V 50Hz motors, change gray wire to brown.

PACK TYPE SPEED CONTROL MOTORS

Characteristics

- Variable speed conversion is possible using speed controller. (50Hz: 90~1400rpm, 60Hz: 90~1700rpm)
- Variable operation is possible such as speed conversion, braking, reversion. (Slow Run/Slow Stop is possible when SS type controller is used)
- Tacho Generator is installed to control feedback, so even when Hz changes, rpm remains the same.
- Applicable motors include Induction Motors, Reversible Motors, and Electromagnetic Brake Motors
- Motor capacity for induction motor is 6W~90W, reversible motor and electromagnetic brake motor is 6W~40W(6W~90W for SR type).

SPECIFICATIONS OF SOCKET TYPE SPEED COTROL MOTORS

GENERAL Built-in thermal protector OF SPEED CONTROL MOTORS

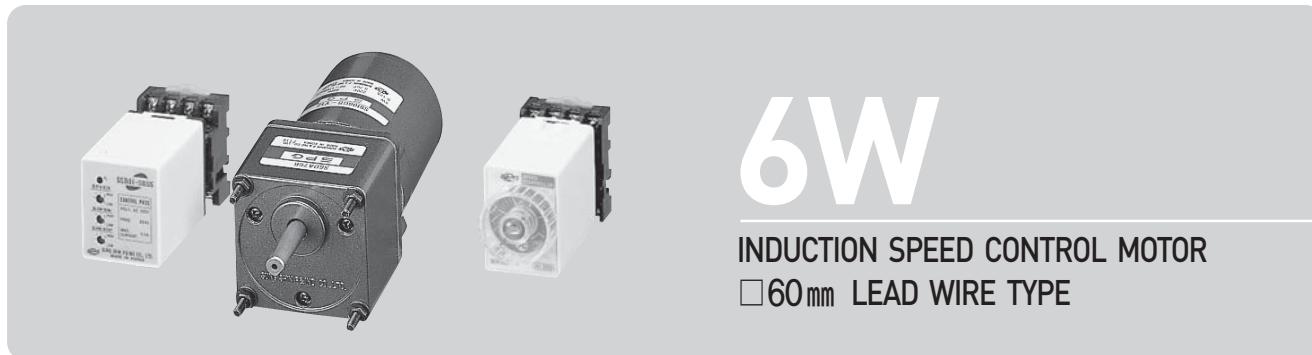

ITEM	Specification
Insulation Resistance	100MΩ or more when 500V megger is applied between the windings and the housing after rated motor operation under normal ambient temperature and humidity
Dielectric Strength	Sufficient to withstand 1.5V at 50/60Hz applied between the windings and the case after rated motor operation under normal ambient temperature and humidity for 1min.
Temperature Rise	80°C or less increase measured by thermometer after rated operation. (less than 45°C for motors with fan)
Insulation Class	Class B(130°C)
Overheat Protection Device	THERMAL PROTECTOR 내장 (automatic return type) : Open 120°C±5°C, Close 76°C±15°C
Ambient Temperature	-10°C ~ +40°C

- ❖ The code in □ of gearhead model is for gear ratio.
- ❖ It is the permissible torque of the assembled motor and gearhead.
- ❖ The permissible torque of the motor and inter-decimal gearhead is 50 kg·cm.
- ❖ ■ color indicates that the output shaft of the geared motor rotates in the same direction as the output shaft of the motor.
Others indicate rotation in the opposite direction.
- ❖ Rpm is based on synchronous speed (50Hz: 1500rpm, 60Hz: 1800rpm) divided by gear ratio.
The actual rotation speed can be 2~20% less than displayed value depending on the load.
- ❖ "L" or "H" type does not apply to motors under 40W.

- ❖ The code in □ of gearhead model is for gear ratio.
- ❖ It is the permissible torque of the assembled motor and gearhead.
- ❖ The permissible torque of the motor and inter-decimal gearhead is 80 kg·cm.
- ❖ ■ color indicates that the output shaft of the geared motor rotates in the same direction as the output shaft of the motor. Others indicate rotation in the opposite direction.
- ❖ Rpm is based on synchronous speed (50Hz: 1500rpm, 60Hz: 1800rpm) divided by gear ratio.
- ❖ The actual rotation speed can be 2~20% less than displayed value depending on the load.
- ❖ "L" or "H" type does not apply to motors under 40W.

- ❖ CE marked at the end of motor model name indicates that it is thermally protected type which has received CE.
- ❖ TP marked at the end of the motor model name indicates that it is standard motor with Thermal Protector mounted.
- S9I60GX()~S24, S9I60GX()~S24CE is thermally protected type with TP mounted.
- ❖ () is for marking 'L' type or 'H'. 'L' should be used with gearhead 'L' and 'H' should be used with gearhead 'H'.
